

Remote Monitoring of Vital Signs of Elderly in the Community: a Feasibility Study

Dr CP Wong ^{JP}

MBBS FRCP FRCPE FRCPG FHKCP FHKAM MHA FHMISS

Chair, Hong Kong Society of Medical Informatics

Chair, HL7 Hong Kong

Founder, eHealth Consortium

Outline

-  eHealth for the elderly
-  Key success factors / barriers
-  The Study Results
-  Conclusion

Why GeronTech?

- 🌐 Older Generation – baby boomers / Silver Tsunami
- 🌐 Maximizing their independency
- 🌐 Aging in Place, Enriching their lives
- 🌐 Alleviate caregivers shortage
- 🌐 Abundance of chronic diseases, Reducing health cost
 - 🌐 83% of HK Elderly above age of 80 have chronic diseases

Are they useful?

- Public Telesurveillance for 38 frail elderly: decreased LOS, decreased home care service, decreased 17-39% health cost (Vincent, 2006)
- Low Tech PERS 87 patients: reduced mortality 4x; reduced hospital utilization 59%; benefit : cost ratio 7:1 (Bernstein 2000)
- Trans European Network 426 Congestive Heart Failure patients: decrease 26% LOS, further 10% on top of call center service; 2.1 ROI (TEN-HMS 2005)
- NHS Sheffield 30 COPD patients reduce 50% of LOS and 80% of home visits (Sheffield 2008)

Figure 4: Outcomes: VHA Care Coordination/Home Telehealth 2004-2007¹¹

| Condition | # of Patients | % Decrease Utilization |
|---------------------|----------------------|-------------------------------|
| Diabetes | 8,954 | 20.4 |
| Hypertension | 7,447 | 30.3 |
| CHF | 4,089 | 25.9 |
| COPD | 1,963 | 20.7 |
| PTSD | 129 | 45.1 |
| Depression | 337 | 56.4 |
| Other Mental Health | 653 | 40.9 |
| Single Condition | 10,885 | 24.8 |
| Multiple Conditions | 6,140 | 26.0 |

Is it easy to adopt?

- Personal Emergency Response System (PERS) originated in Germany with Hormann's concept of "home alert" (*Hausnotruf*) in 1970.
- In 1989 LifeCall first launched in Canada; now 2014 still only 5% needy elderly use PERS (HK 10%)

Barriers

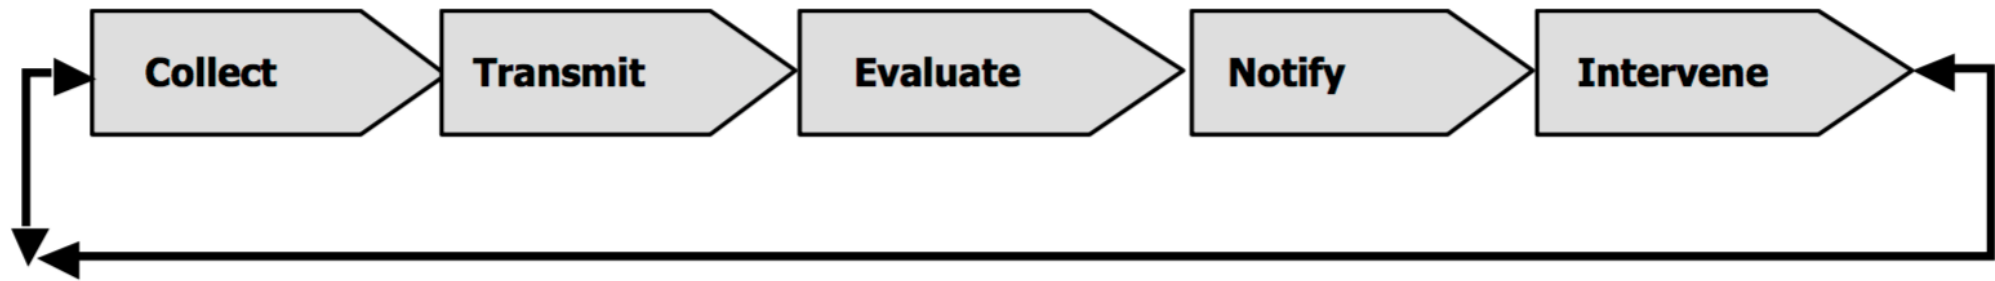

- 🌐 Some with impaired vision, hearing, dexterity 39%
- 🌐 Phobias / skeptic on technology 35%
- 🌐 Difficulty in learning new things 77%
- 🌐 Afraid of being stigmatized
- 🌐 Poor Awareness
- 🌐 Too expensive
- 🌐 No reimbursement

Key success factors

- 🌐 Device must be SIMPLE to use !
- 🌐 Feedbacks or Alerts must be SENSIBLE / NOISE FREE / VARIABLE
- 🌐 Healthcare Service Background Support must be AVAILABLE
- 🌐 It must be cost effective if not inexpensive

A closed ecosystem

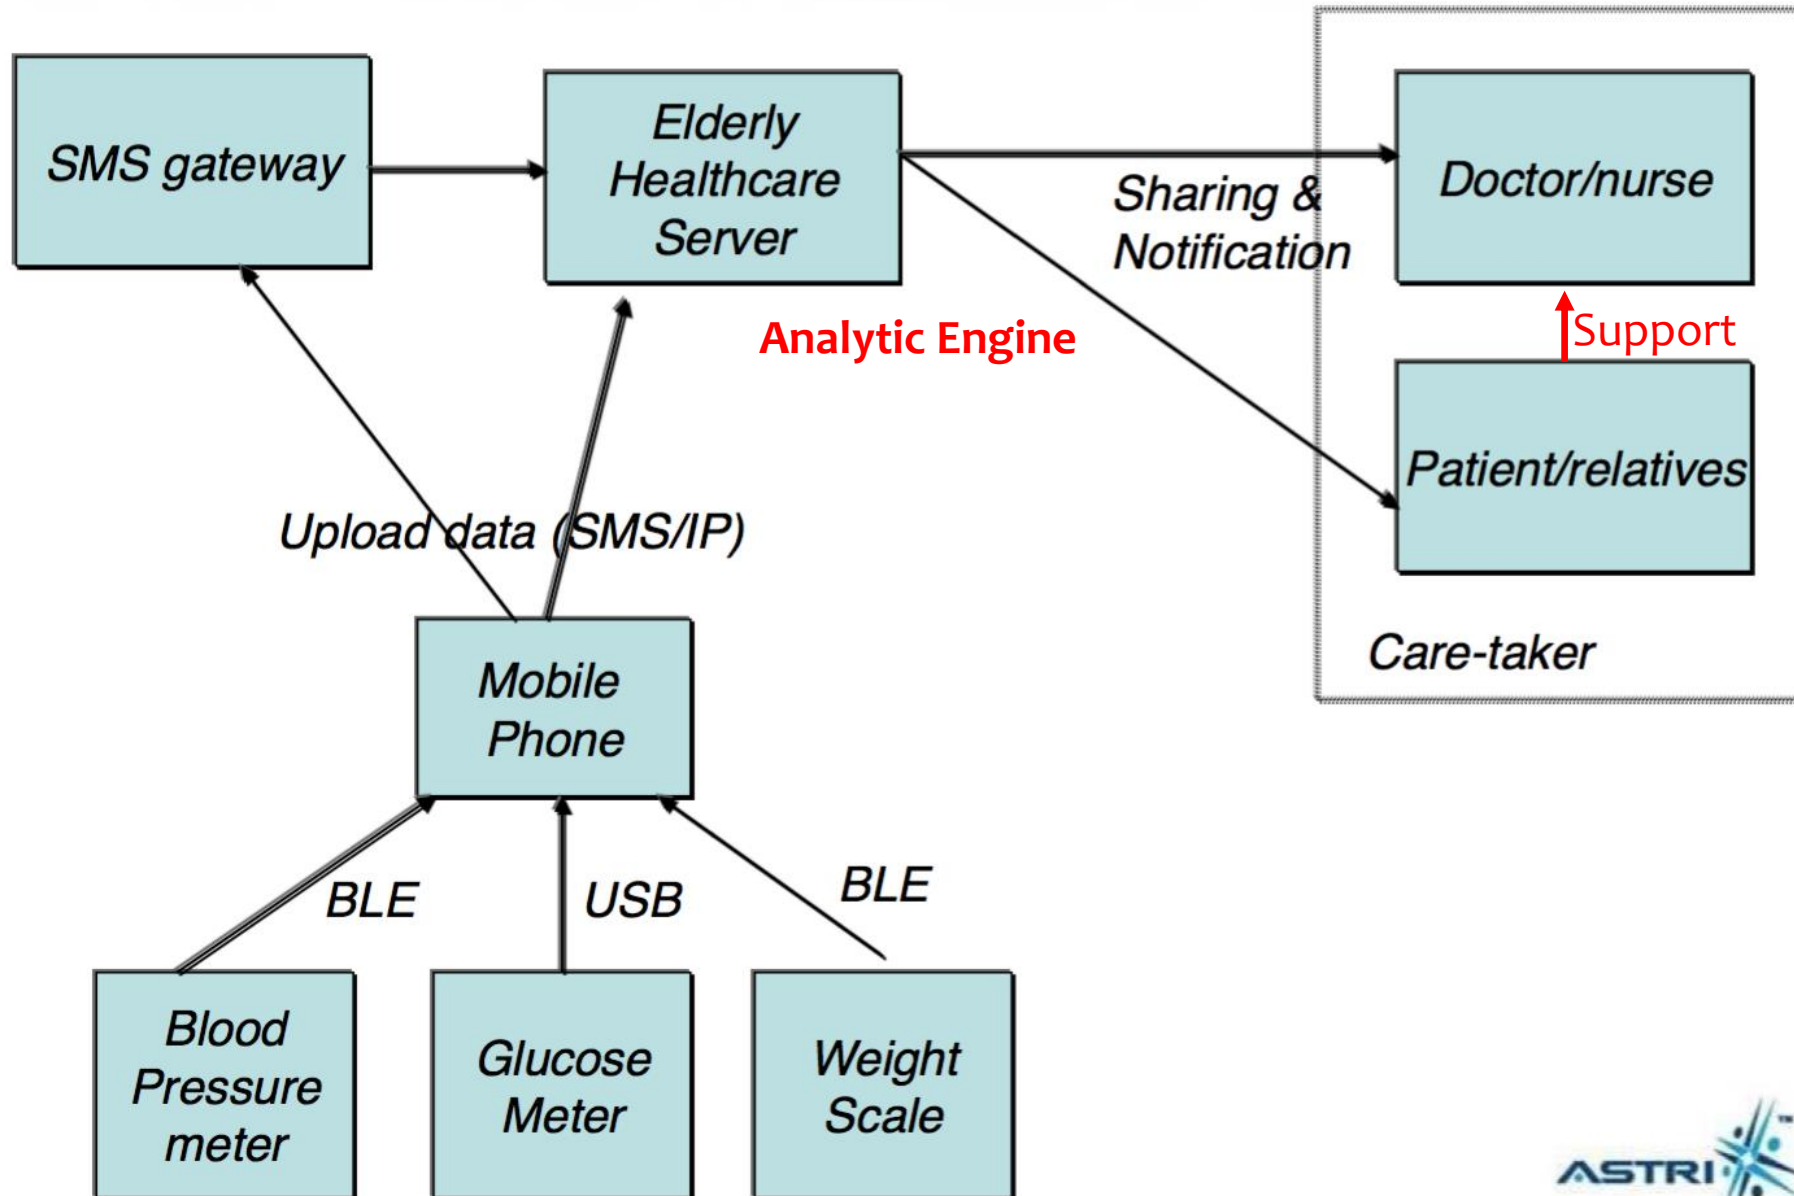

Figure 1: Remote Patient Monitoring Process

Key Objective

-  To design a platform for eHealth for elderly so that it is very user friendly
-  To adopt medical professional analytic algorithm to increase accuracy
-  To provide a network for healthcare provider background support
-  To assess the usability, feasibility & acceptance of users

High Level Execution Plan – System Architecture

The System Design

- Seamless Data Collection
- ONE button turn-key
- No difference from usual use

No cumbersome clicks

Equipment

- 🌐 Motorola Moto G 1st Gen 4.5" display 1G RAM
- 🌐 3G, Bluetooth 4.0 BLE, microUSB v2.0
- 🌐 Android 4.4 KitKat
- 🌐 As Receiving / Transmitting Console
- 🌐 HK\$1000

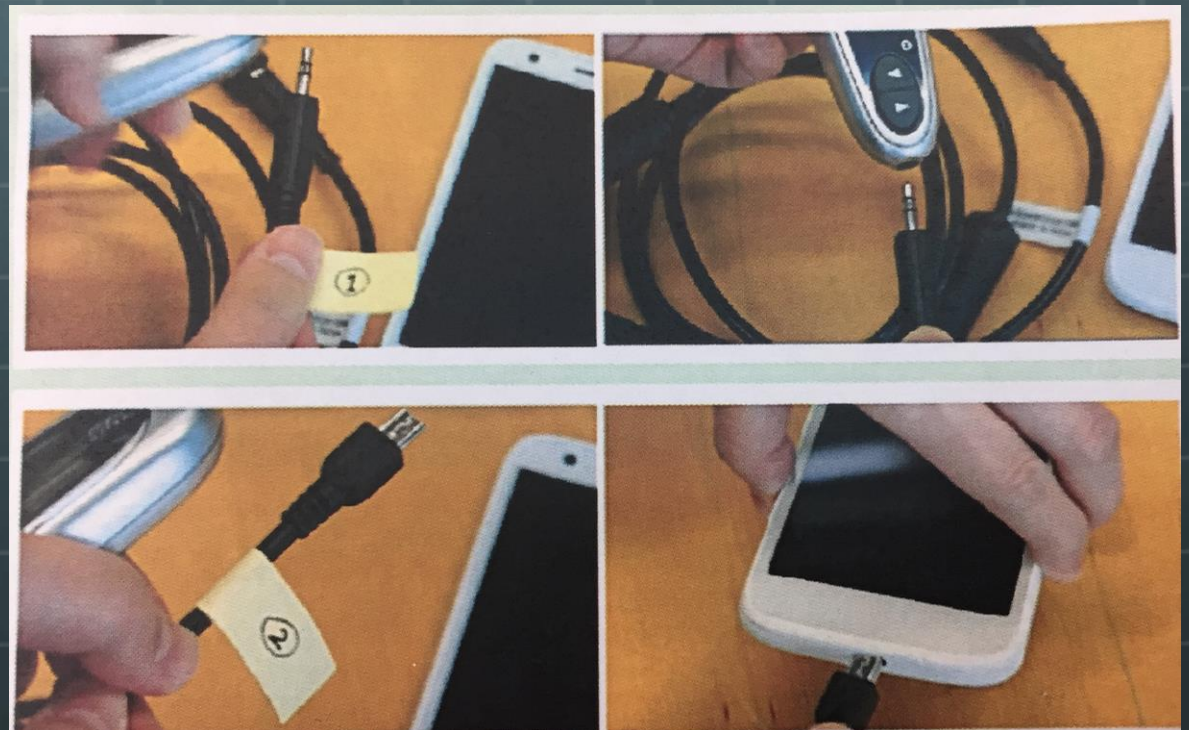

BP Monitor

- 🌐 Oregon BPU 3210S
- 🌐 4.0 BLE
- 🌐 HK\$900
- 🌐 Store 100 data
- 🌐 Talking function in Cantonese

Blood Glucose Monitor

 Johnson & Johnson OneTouch UltraEasy

Weight Scale

- 🌐 CURA XY-6073 with Bluetooth BLE
- 🌐 No button to press
- 🌐 Voice read your weight in 2 seconds
- 🌐 Automatic sending of data

Black

A simple user manual

長者遙距保健平台

簡易操作說明

血壓，血糖及體重測量

香港應用科技研究院

Simple Instructions

血壓計使用及數據上傳

① 戴上血壓計

如圖所示方向戴好血壓計，將手臂平放於桌面，保持心情平靜和呼吸勻暢。

② 按兩次血壓計上的開關按鈕開始量度

兩次之間最好不要太快。

Intuitive

- ③ 血壓量度同時，電話會有語音及畫面提示血壓計連接成功

- ④ 等待血壓量度結果，及數據成功上傳至電話

量度血壓時，依照電話提示完成量度即可。無需在電話上作任何操作。

- ⑤ 除下血壓計，完成。

Precision Analytics

Personalized:

-  Sex
-  Age
-  Smoker
-  Diabetes
-  Kidney Disease
-  Symptomatic CVS Disease
-  Organic Damage
-  High Cholesterol
-  Family History
-  Obesity

Professional:

-  2013 European Society of Cardiology/Hypertension ESC/ESH Guidelines
-  2013 American Diabetes Association ADA Guidelines
-  Expert Panel of cardiologists, endocrinologists, geriatricians & family physicians

Patient Specific Algorithm

Medical Information

| | |
|---|--------|
| Smoker (Current) | Y or N |
| Diabetes | Y or N |
| Hypertension | Y or N |
| Microalbuminuria | Y or N |
| Symptomatic CVD | Y or N |
| Organ Damage (eye/ kidney/ heart / brain) | Y or N |
| Lipid Problems | Y or N |
| Family History of Premature CVD (M<55,F<65) | Y or N |
| Obesity (BMI ≥ 27) | Y or N |
| High Blood Sugar (5.6 - 6.9 mmol/L) | Y or N |

Alert Systems

- 🌐 Highly Personalized
- 🌐 Separately to the patient, caregiver & family physicians
- 🌐 Alerts included: Out of bounds, critical Hi/Lo, rolling averages, rapid rising or falling trends, congratulatory messages with incentives
- 🌐 All alerts levels can be configured by caregiver and doctors
- 🌐 Finally endorsed by doctors

Rules Engine

SBP 130-139 AND OR DBP 85-89
HT=HIGH NORMAL BLOOD PRESSURE
IF RF=0, RLVL=MINIMAL RISK(0)
IF RF=1,2, RLVL=LOW RISK(1)
IF RF>=3, RLVL=LOW TO MODERATE RISK(2)
IF OD OR CDK3 OR DM=T, RLVL=MODERATE TO HIGH RISK(3)
IF CKD4=T OR CV=T OR (DM=T AND RF>=1 OR OD=T), RLVL=VERY

-  >140 rules
-  Highly personalized
-  Requires medical professional endorsement
-  Highly stratified into risk levels
-  Gives individualized congratulatory messages or warnings

Risks Levels

| Other risk factors, asymptomatic organ damage or disease | Blood pressure (mmHg) | | | |
|--|--|---|---|---------------------------------------|
| | High normal SBP 130–139 or DBP 85–89 | Grade 1 HT SBP 140–159 or DBP 90–99 | Grade 2 HT SBP 160–179 or DBP 100–109 | Grade 3 HT SBP ≥180 or DBP ≥110 |
| No other RF | | Low risk | Moderate risk | High risk |
| 1–2 RF | Low risk | Moderate risk | Moderate to high risk | High risk |
| ≥3 RF | Low to moderate risk | Moderate to high risk | High risk | High risk |
| OD, CKD stage 3 or diabetes | Moderate to high risk | High risk | High risk | High to very high risk |
| Symptomatic CVD, CKD stage ≥ 4 or diabetes with OD/RFs | Very high risk | Very high risk | Very high risk | Very high risk |

BP = blood pressure; CKD = chronic kidney disease; CV = cardiovascular; CVD = cardiovascular disease; DBP = diastolic blood pressure; HT = hypertension; OD = organ damage; RF = risk factor; SBP = systolic blood pressure.

| Risk Level | Possibility of Cardiovascular Events in 10 Years |
|-------------------|--|
| Minimal | N/A |
| Low | < 1% |
| Moderate | 2% |
| Moderate to High | 3 – 4% |
| High | 5 – 10% |
| High to Very High | > 10% |
| Very High | > 15% |

FIGURE 1 Stratification of total CV risk in categories of low, moderate, high and very high risk according to SBP and DBP and prevalence of RFs, asymptomatic OD, diabetes, CKD stage or symptomatic CVD. Subjects with a high normal office but a raised out-of-office BP (masked hypertension) have a CV risk in the hypertension range. Subjects with a high office BP but normal out-of-office BP (white-coat hypertension), particularly if there is no diabetes, OD, CVD or CKD, have lower risk than sustained hypertension for the same office BP.

Creative encouraging alerts

 Chan Tai Man, you have got an alert on blood pressure 陳大文...

親愛的陳大文，

恭喜！你的血壓屬於正常。

以下是你的血壓量度記錄：

上壓：123.0 mmHg
下壓：82.0 mmHg
脈搏：89.0 bpm
([2016-02-05 18:04:28](#))。

如要獲得更多信息，請登入 <https://218.189.15.217> 查看你的個人記錄。

謝謝

評語 (Comments)

Systolic Blood Pressure: average 110.5 mm/Hg

Diastolic Blood Pressure: average 67.46 mm/Hg

Pulse: mean 75.75 beats/minute

Blood Pressure under Optimal Control in 14.58% of time

Cardiovascular Risk is Minimal.

上壓: 平均 110.5 mm/Hg

下壓: 平均 67.46 mm/Hg

心跳: 平均 75.75 下/分

14.58% 的時間裡血壓受到良好控制

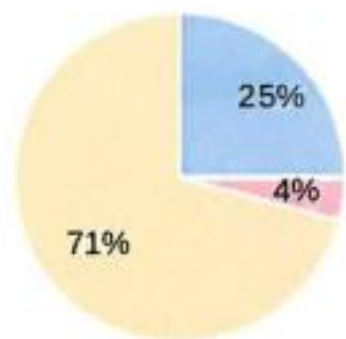

心血管疾病風險指數是極低。

Trial Period

- 🌐 March 3 to July 14, 2015
- 🌐 6 Family Physicians
- 🌐 Each recruit 5 patients with age >55
- 🌐 Total 30 patients, 26 completed the trial, 23 active users
- 🌐 Uploading vital signs automatically
- 🌐 Alerts sent to caregivers and doctors via SMS/emails upon patient consent

Trial Schedule Overview

| Elderly Healthcare Solution Platform Trial | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|--|--|---|---|---|-----|---|---|---|------------------------------|---|---|---|-----|---|---|---|-----------------------------------|---|---|---|-----|---|---|---|------|---|---|---|

Today! Trial end date: July 14

Age of patients

average 65.4

| Age | Number |
|-------|--------|
| 55-60 | 6 |
| 61-75 | 15 |
| 76-89 | 5 |

Results

 Usage rate is very good

| | |
|--|-----------|
| Total number of device packages disseminated | 30 |
| Total number of device packages put on trial | 28 |
| <i>Total number of participating patients</i> | 23 |
| <i>Total number of participating patients in active usage status</i> | 23 |
| <i>Total number of withdrawn patients</i> | 3 |
| Total number of patient enrollment | 26 |

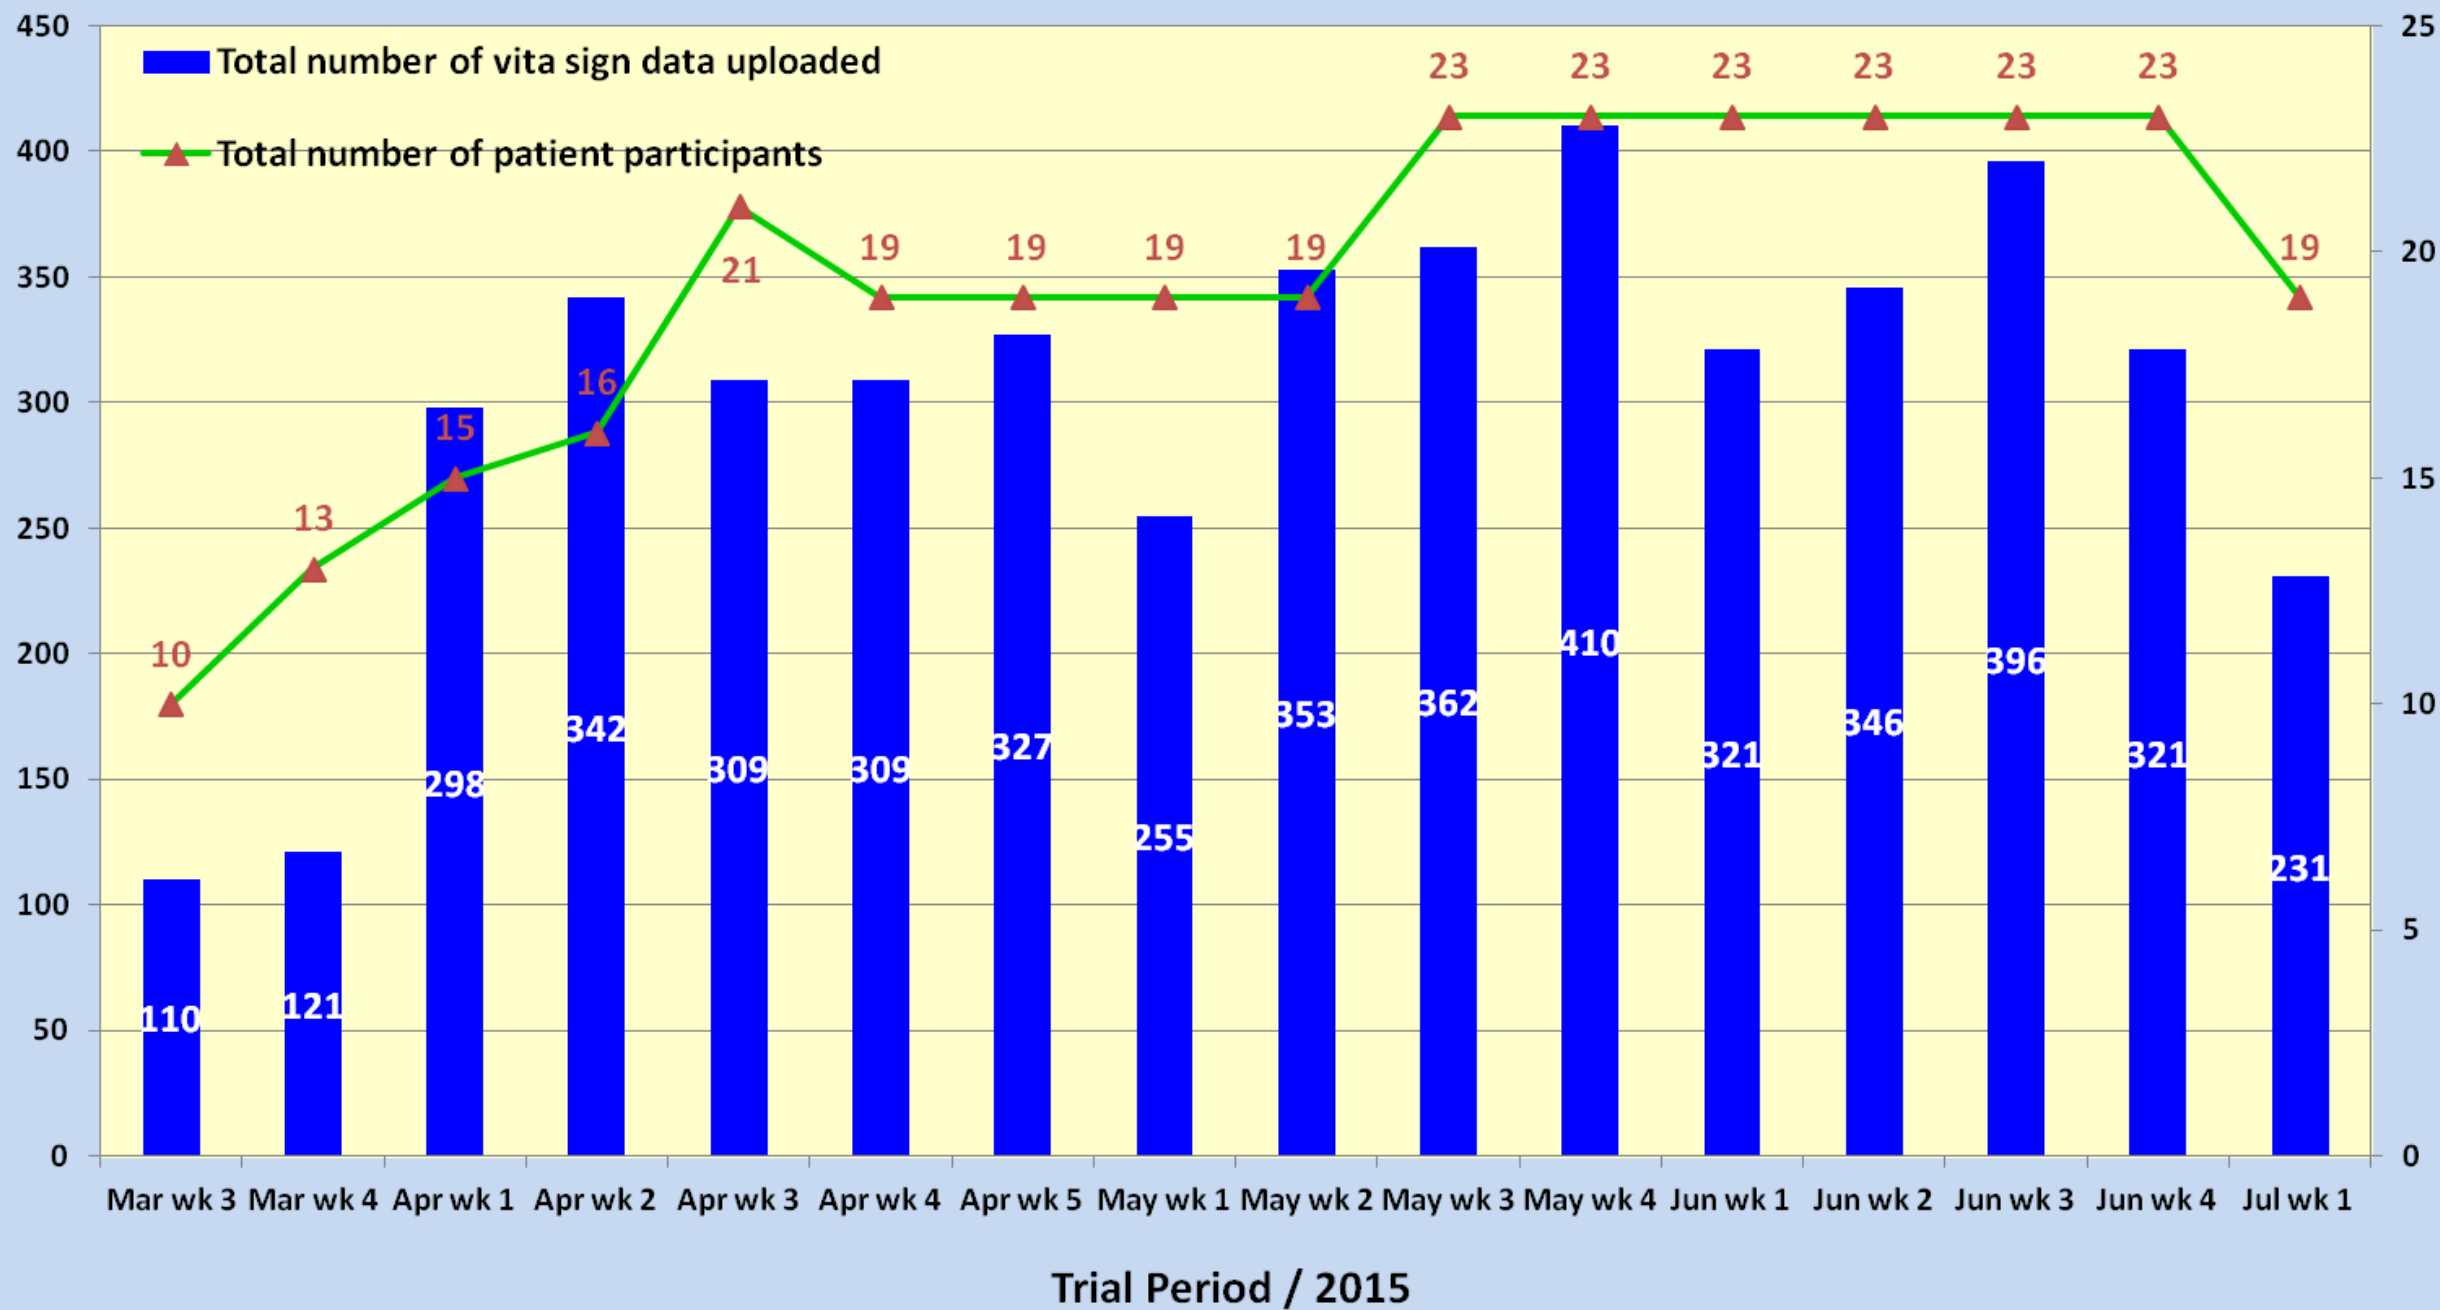

3 patients withdraw

- 🌐 1 F/86 finds it difficult to use especially the USB connected Blood Glucose Meter
- 🌐 2 patients M/56 M/67 idle after a week; no maid to help / maid on vacation / unable to be contacted
- 🌐 Drop out rate $3/26 = 11.5\%$
- 🌐 Completion rate 88.5%

Inactive cases

- 🌐 10-15% of the 26 cases were found to be inactively uploading data
- 🌐 Follow up call by the research team called to encourage them
- 🌐 23 cases out of 26 cases actively upload data regularly

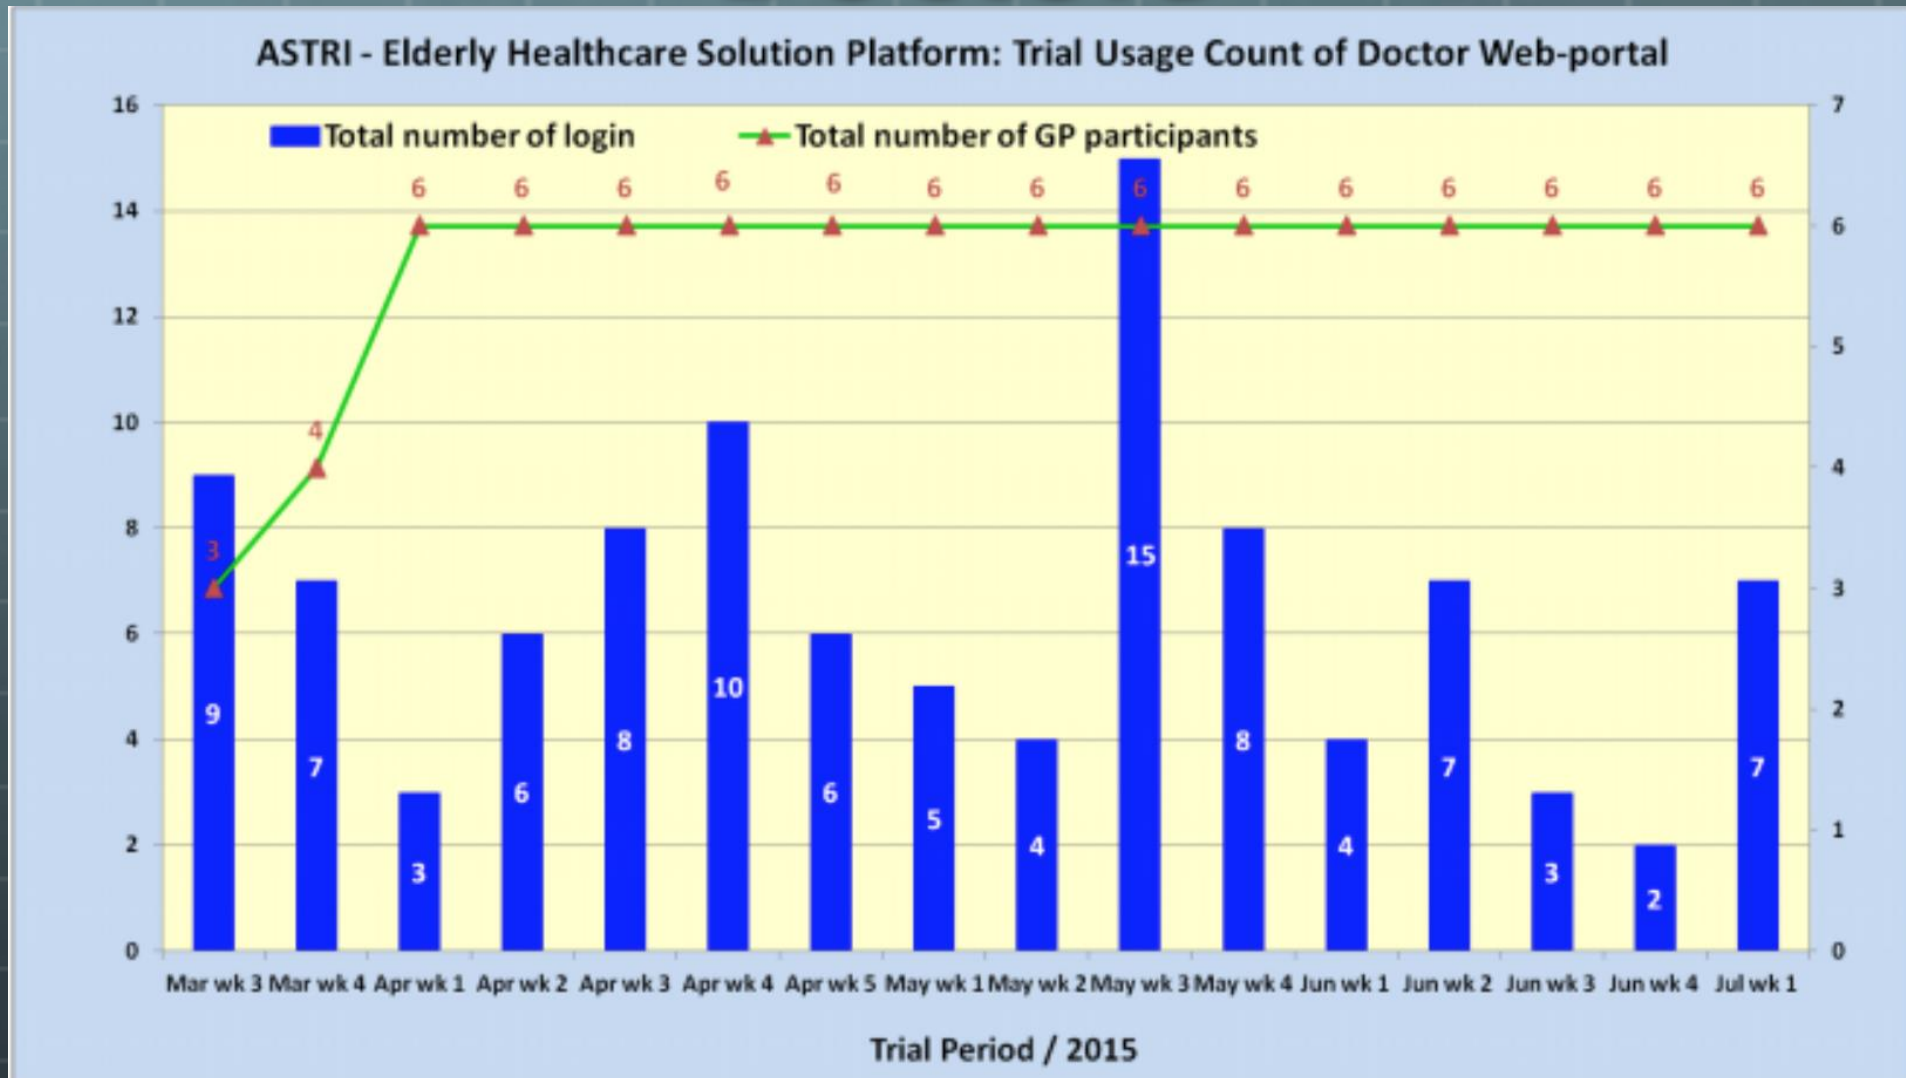

ASTRI - Elderly Healthcare Solution Platform: Trial Usage Count of Patient Device Package

SMS Alerts Count

- 🌐 Out of total of 4,903 data uploads (63 data / month / patient)
- 🌐 Total of 452 Alerts fired in 3 months
- 🌐 Alert rate = 9.2%
- 🌐 Average alert rate 150 per month per 26 patients (5.8 / month / patient)
- 🌐 2 Alerts are being intervened, with drug adjustments (0.44%)

Web Portal Usage Rate by Doctors

Web Portal Usage Rate by Patients & Caregivers

- 🌐 Only 8 out of 26 patients / caregivers ever logged onto the web portal
- 🌐 Login rate:
 - 🌐 7 of them logged in < 3 times
 - 🌐 1 of them logged in > 10 times

Overview of Alert Settings by GP

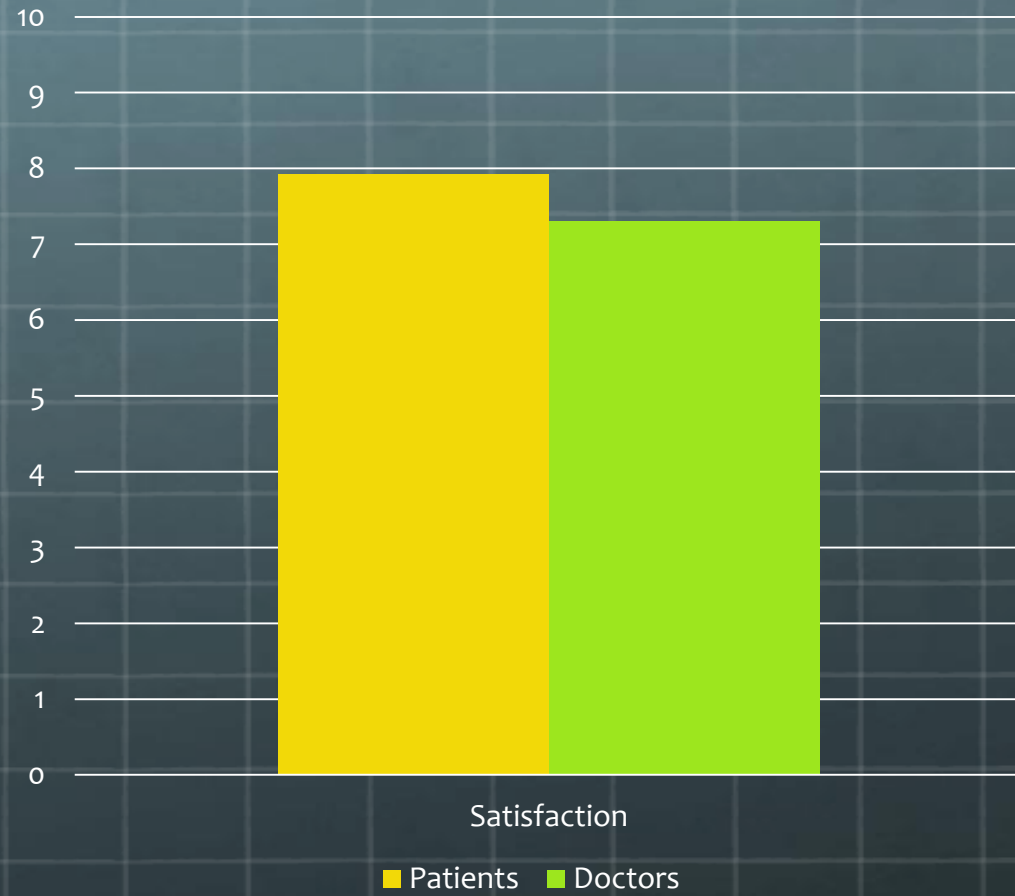

- 🌐 Only 5 GP used the Alert Settings:
 - 🌐 4 used the default settings suggested by the literature
 - 🌐 1 used a modified setting by himself
- 🌐 1 GP DID NOT USE the alerts
 - 🌐 His concern: Liability Issue & support logistics concern

Minor Hiccoughs

-  3 episodes of Hard Ware defects
-  1 data sync error: because of date settings, reversible
-  1 data upload error: operating issue
-  1 SMS SIM card error

Satisfaction Survey

Feedback by Doctors

- 🌐 6 out of 6 questionnaires returned
- 🌐 5 out of 6 agreed that the system is easy to use
- 🌐 5 out of 6 agreed that it assists in patient care
- 🌐 5 out of 6 agreed that the platform can make the patient doctor relationship closer

Feedback by patients

- 🌐 23 out of 26 questionnaires returned
- 🌐 21 (90%) elderly indicated that they use the system BY THEMSELVES
- 🌐 2 used the system with help of family members
- 🌐 21 elderly reported that they check the Apps for records
- 🌐 70% indicated that they are willing to pay for the service if the fees is <HK\$100 per month

Observations from post-trial interview

- **Enhanced patients' healthcare awareness**

“My patients measured Blood Pressure and Blood Glucose at least once per week after joining the Trial whereas they measured these vital signs only once per half a year before the Trial.”

- **Promoted data sharing**

“I found my patient acted on his own incentive to share his Blood Glucose data with another doctor , his own diabetes doctor.”

- **Appreciated user-friendliness**

“My father can do the measurement by himself completely. It's really a seamless system!”

“During this Trial, my patients just brought the mobile phone to show the data record in the EHSP App, rather than carry his/her own Blood Glucometer previously.”

Conclusions

- 🌐 The devices have been configured to be extremely simple to be used
- 🌐 The adoption rate is high at 90%
- 🌐 Alert rate is 9.2%, with 0.44% intervention rate
- 🌐 Web portal usage by doctors are average, Web portal usage by patients are poor
- 🌐 100% of patients and 90% of doctors found the system useful
- 🌐 There is business opportunity using this service model

The Future

- 🌐 Personal vital signs data should be uploaded and incorporated into the Electronic Health Record Sharing System
- 🌐 To facilitate earlier diagnosis and intervention
- 🌐 And to improve continuity of care of chronic diseases
- 🌐 Apart from the community, those data from the ward and out patient settings should also be incorporated
